jumbo bag

Jumbo bag refers to large and flexible bags that are made of sacks and have handles made of polypropylene straps

They are the most appropriate and least expensive way to move and store powder and bulk materials such as cement, minerals, and food products.

Fabric material: Polypropylene fibers - Number of bundles: 2-4-8 pieces - Capacity: 0.5 to 5 tons

Types of side bags:

In terms of material: plain, plain with nylon, laminate and laminate with nylon

In terms of charging and discharging: a. Plain bottom b. Discharge spout c. Full open bottom

Description 1: The laminate makes it resistant to moisture and is used to ensure the non-penetration of water in the nylon model.

Description 2: Jumbo bag with a discharge opening is used to discharge the load with suction devices.

For traditional unloading and loading, if it is possible to turn the package upside down, a simple floor bag is used, otherwise, a bag with an unloading hopper and a charging hopper is used.

According to the points raised by the customer regarding the low cost and waterproofness of the product, the type of simple nylon jumbo bag with 1 Discharge hopper with the following technical specifications is suggested.

Technical Specifications

type	Plain with nylon	size	90* 90 * 110 cm
Materials	Polypropylene fiber sack	Weight	2.300 grams
terms of charging and discharging	One Discharge spout	Anti-spill	Yes
anti humidity	Yes	Waterproof	yes

- marine
- aerial
- Railroad
- Combined

Type of insurance

Cargo insurance under conditions A is the most complete type of cargo insurance coverage, in which all risks that threaten the cargo during transportation (except for the exceptions mentioned in the contract) are covered by cargo insurance.

Cargo risk

All types of fire, explosion, grounding, sinking, overturning or derailment of ground transportation, collision with foreign objects, identification of goods in the emergency port, general loss, rescue and throwing goods into the sea, earthquake, volcano, lightning, etc. goods falling overboard from a ship, drowning from salt and fresh water as a result of sea, lake or river water entering a vessel, land transport vehicle, container and warehouse of goods and total loss of any complete package of goods during loading or unloading from the vessel

War, strike, inadequacy of the container or means of transport for the safe transportation of the insured item, damage or expense due to the inherent defect or nature of the insured item, damage or expense due to insufficient or inappropriate packaging or preparation of the insured item for transportation. There are also other risks that are not covered by insurance

How to pay

It is acceptable to pay money in cash or Telegraphic Transfer.

prepayment

Half of the material value of the project is defined as advance payment.
